Diabetes Prediction Report

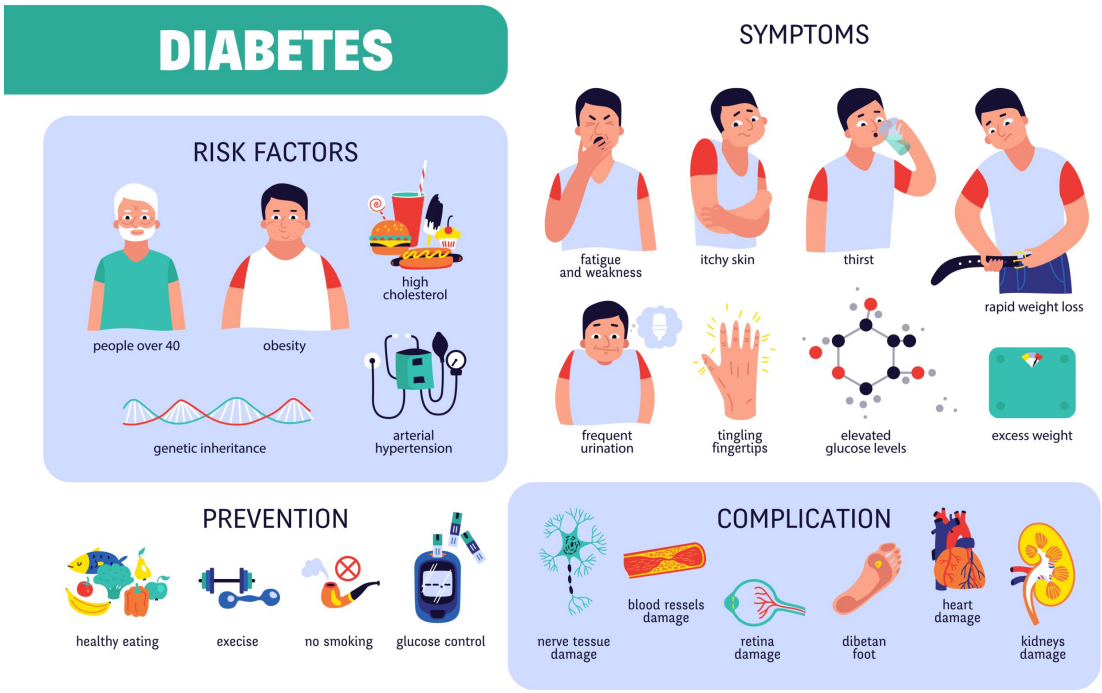
Name: Preetha Rhythami

ID: 02

Date: 2025-07-10 14:20:52

Diabetes is a chronic health condition that affects how your body turns food into energy. Most of the food you eat is broken down into sugar (glucose) and released into your bloodstream. When blood sugar goes up, it signals your pancreas to release insulin. If you have diabetes, your body either doesn't make enough insulin or can't use it as well as it should. Over time, this can cause serious health problems, such as heart disease, vision loss, and kidney disease.

Early detection through testing is essential to managing or even reversing the progression of diabetes. This report aims to provide a predictive analysis based on key health indicators entered above.



Parameter Details

Parameter	Value
Pregnancies	1
Glucose	5
Blood Pressure	7
Skin Thickness	56
Insulin	176
BMI	37.0
Diabetes Pedigree Function	85.0
Age	31

Prediction Result: Not Diabetic

Health Advice:

Risk Level: Low. Continue healthy lifestyle, regular check-ups, and balanced diet.
